

Information for Cochrane Course Participants

Please prepare for the course by completing the following steps:

1. There will be a computer-based exercise. Participants need to bring a laptop with RevMan 5 installed. RevMan can be freely downloaded from <http://tech.cochrane.org/revman/download>. For those unfamiliar with RevMan or its DTA component, it is worth trying it out using the [tutorial](#). Alternatively, participants can try out the DTA review tutorial in RevMan, which can be accessed via the help menu.
2. For participants interested in some pre-course reading, see the pre-course [reading list](#). The readings are numbered in order of priority/importance. All handouts, including lecture slides, will be made available in a dropbox folder for participants to download a few days before the course.
